

**Systematic Disinfection / Cleaning Protocol for Any Object Used during
Limited In Person EI Therapy or Instruction Sessions**

- Prior to any session, hand hygiene on entry is required: wash with soap and water for 20 seconds or use an alcohol-based hand sanitizer with 60-95% alcohol.
- Prior to session initiation, EI/ECSE staff, using the provided disinfecting cleaner and disinfectant, will clean all surfaces and chairs prior to use.
- EI/ECSE staff will be trained and required to: disinfect toys, manipulatives, or other objects using approved cleaning disinfectants such as Lysol, Hepastat, etc. in between each session.
- Any item, toy, manipulative used during the therapy/ intake/evaluation will be placed in a container labelled “to be disinfected/sanitized” prior to next in person therapy or instruction session.
- Upon ending the therapy/ instruction session, the EI/ECSE staff member will clean any surface that was utilized using the provided disinfecting cleaner and disinfect any item in the “to be disinfected/sanitized’ container.
- Hand sanitizer will be available to staff, parent, and child throughout the interaction.
